Brand Style Guide

SLHE Game Programming - Video Game Creation

VIDEO GAME CREATION

Purpose

This document defines the shared visual identity for every course material - slide decks, handouts, keys, guides, and templates. It matches the Lesson 1 slide deck, the Lesson 2 slide deck, and the Game Design Document template. Any new document should pull from this palette rather than inventing new colors.

For Word/.docx documents built with docx-js, the shared module brand.js (in the same build-scripts folder as everything else) is the single source of truth - it exports the colors below plus ready-to-use pageHeader(), pageFooter(), and titleBlock() helpers so every document's header, footer, and cover page stay identical without copy-pasting.

Color Palette

Same hex values used in the PowerPoint decks (generate_deck.js / generate_deck2.js) and the GDD template (build_gdd2.js).

Navy	`#16305C`	Primary headings (H1), crest shield, dark slide backgrounds
Navy 2	`#1C4A86`	Secondary headings (H2), body accents, table header fill
Gold	`#C99A2E`	Rules, borders, accents, crest highlights
Gold (text)	`#8A6D1E`	Darker gold used only for text-on-white (the plain Gold above fails contrast as body text)

Typography

- Word documents: Arial throughout. Heading 1 = 15pt bold Navy. Heading 2 = 12pt bold Navy 2. Heading 3 = 11pt bold dark gray (#444444). Body = 11pt.
- Slide decks: Cambria for titles/headings, Calibri for body text (see generate_deck.js).

- Code/monospace samples: Courier New - not Consolas. Consolas isn't reliably available across every machine/renderer this course's materials pass through, and substitutes render with broken kerning.

Logo / Crest Usage

The Video Game Creation crest (vgc_crest.png / vgc_crest.svg) is a shield with a controller emblem, gold laurel wreath, "S L H E" top ribbon, and "Video Game Creation" bottom ribbon.

- Cover/title pages: centered, roughly 1.3-1.6in wide (aspect ratio is fixed at 840:1040 - always scale width and height together).
- Slide title/closing slides: centered on the dark navy background, ~2in wide (see bg_title_with_vgc.png).
- Don't recolor, stretch, or crop the crest. If a plain SLHE (non-class-specific) mark is needed instead, use slhe_crest.png.

Header & Footer Pattern

Every multi-page Word document uses the same running header and footer, produced by brand.pageHeader(docTitle) and brand.pageFooter():

- Header (top-right): "VIDEO GAME CREATION | <document title>" in small caps, gold text for the tag and muted gray for the title.
- Footer: "SLHE Game Programming" on the left, "Page N" on the right, muted gray, tab-stop aligned.

Cover Page Pattern

Produced by brand.titleBlock(title, subtitle) - crest, then a bold Navy title, an optional Navy 2 subtitle, and a small gold "VIDEO GAME CREATION" tag line, all centered. This page you're reading uses exactly that pattern.

Using brand.js in a New Build Script

At the top of any docx-js build script:

```
const brand = require("./brand.js");
```

- styles: brand.stylesBlock (pass directly as the Document's styles option)
- headers: { default: brand.pageHeader("Your Document Title") }
- footers: { default: brand.pageFooter() }
- Cover page content: ...brand.titleBlock("Title", "Optional subtitle")
- Any other Navy/Gold usage: brand.NAVY, brand.NAVY2, brand.GOLD, brand.GOLD_TEXT
