Lesson 4 Teacher's Key

001 Game Creator

INSTRUCTOR ONLY - do not distribute to students

Level 1 - Complete Worked Solution

One Actor Trigger script on the enemy Actor itself:

```
enemy Actor Trigger: Collided with actor ->
  Actor – Destroy/Revive Actor(relate, Destroy)
  Actor – Destroy/Revive Actor(this, Destroy)
```

Level 2 - Complete Worked Solution

Once the enemy Actor is destroyed, it no longer exists to collide with anything, so its own "Collided with actor" trigger can't run a second time - the enemy can only ever be destroyed once, even if two bullets somehow reach it on the same update. No extra scripting is needed for Level 2.

Level 3 - All Worked Solutions

Every stretch-goal idea from the handout, fully worked - not just one. Useful for validating each idea actually works before class, and as a ready reference no matter which one a student ends up picking.

Sound: play on hit

Import sfx_hit.wav (Resources > Import > Sound), then add a "Play Sound" event before the two Destroy events:

```
enemy Actor Trigger: Collided with actor ->
  Play Sound(sfx_hit.wav)
  Actor – Destroy/Revive Actor(relate, Destroy)
  Actor – Destroy/Revive Actor(this, Destroy)
```

Visual: give the enemy its own look

Set Tint/Opacity directly on the enemy Actor Template's own Graphics Options - a Template-level setting, so it applies with zero extra events, the same technique Lesson 3 used for the bullet's own look.

Structure: keep hit-response on the enemy Actor

Keep everything about how the enemy responds to being hit - the sound, both Destroy events - on the enemy Actor's own "Collided with actor" trigger. The bullet Actor doesn't need any new scripting at all this week; it only needed to exist as something the enemy's trigger could detect.

Complete Level 3 solution (all 2 goals combined)

The enemy Actor Template's own settings plus its collision trigger script:

```
enemy Actor Template settings:
  Graphics Options -> Tint/Opacity set
enemy Actor Trigger: Collided with actor ->
  Play Sound(sfx_hit.wav)
  Actor – Destroy/Revive Actor(relate, Destroy)
  Actor – Destroy/Revive Actor(this, Destroy)
```

Alternate Path Notes: Textual Scripting

Reiterate to students in person: this mode switch is genuinely irreversible per-project. Confirm they're working in their separate throwaway project from Lesson 3.

Exact text-command names should be checked against the installed version's Script Editor autocomplete or the wiki before class.

The Level 3 sound idea maps onto Textual commands too - a typed equivalent of Play Sound. The visual idea needs no scripting either way, since it's a Template-level setting in both modes.

- This path exists for students who've realized they prefer typing code and want to see whether 001 Game Creator supports that style too - it does, with the same irreversibility caveat as Lesson 3.
