Lesson 6: Victory Condition

GDevelop

VIDEO GAME CREATION

This week: a real win condition. Your job is to track how many enemies are left and show "You Win!" the moment the last one is destroyed - completing your game's Level 1 MVP milestone.

Open your own [YourName]Game project from Lesson 5 - don't start a new one. Everything this week builds on the row of enemies you already have.

Tip: no new assets this week - "You Win!" is shown with each engine's own basic text tools, not an image.

Setup

1. Open your [YourName]Game project from Lesson 5.
2. Add a new Text object, name it WinText, set its content to "You Win!", place it on screen, and hide it (uncheck its visibility, or add a "Hide" action at the beginning of the scene).

Level 1 - Minimal (MVP)

The moment the last enemy is destroyed, "You Win!" appears on screen. This completes your game's Level 1 MVP milestone - a complete, playable core loop.

3. In your Combat event group's collision event (Bullet is in collision with Enemy), add an action to decrease EnemiesRemaining by 1, right alongside the existing Delete actions.
4. Add a new event: Condition "EnemiesRemaining <= 0" -> Action "Show" WinText.
5. Click the green Preview button and destroy every enemy to test - "You Win!" should appear the instant the last one is destroyed.

```
Combat event group:
Condition: Bullet is in collision with Enemy
Action: Play a sound (sfx_hit.wav)
Action: EnemiesRemaining = EnemiesRemaining - 1
Action: Delete Bullet
Action: Delete Enemy

(new event, outside the group)
Condition: EnemiesRemaining <= 0
Action: Show WinText
```

Level 2 - Complete (Alpha/Beta)

The win text appears exactly once, exactly when the last enemy is destroyed - not early, not late, and not repeatedly.

- Destroy all 5 enemies and confirm "You Win!" appears once the count reaches zero and stays visible - not flickering on and off.
- This already works correctly because the win-check event's condition (EnemiesRemaining <= 0) stays true forever once it's reached, and "Show" on an already-visible object simply does nothing extra.

Level 3 - Refined (Ready to Publish) - pick any that interest you

- Sound: add a "Play a sound" action to the win-check event, using the provided sfx_win.wav.
- Visual: add a "Change the scale of an object" or "Tween" action to the win-check event so WinText grows in instead of just appearing.
- Structure: keep the win-check as its own separate event, clearly outside the "Combat" event group - it reads EnemiesRemaining but isn't really part of the hit-detection logic itself. (GDevelop's scene variables are already global rather than tied to any one object, so there's no separate "GameManager" object to introduce the way Scratch/Godot/GameMaker/Unreal now use - the scene variable already plays that role natively.)

If Something's Wrong

- "You Win!" never appears: confirm EnemiesRemaining is actually being decreased inside the collision event, and that its starting value (set when spawning) matches the number of enemies actually created.
- "You Win!" appears immediately at the start: confirm EnemiesRemaining's starting value is being set correctly (5, not 0) before any enemies are destroyed.
- WinText never shows even though the condition seems true: confirm WinText was actually given a "Hide" action at the start rather than being deleted or never placed on the scene.
