Lesson 6 Teacher's Key

GDevelop

INSTRUCTOR ONLY - do not distribute to students

Level 1 - Complete Worked Solution

A scene variable updated inside the existing Combat event, plus a new event to show a pre-placed, hidden Text object:

```
At the beginning of the scene:
Action: EnemiesRemaining = 5
Action: Hide WinText

Event group: "Combat"
Condition: Bullet is in collision with Enemy
Action: Play a sound (sfx_hit.wav)
Action: EnemiesRemaining = EnemiesRemaining - 1
Action: Delete Bullet
Action: Delete Enemy

(new event, outside the group)
Condition: EnemiesRemaining <= 0
Action: Show WinText
```

Level 2 - Complete Worked Solution

EnemiesRemaining is only ever decreased inside the same collision event that already runs once per actual hit, and the win-check condition stays true forever once reached - "Show" on an already-visible object does nothing extra, so the message never flickers or double-fires.

Level 3 - All Worked Solutions

Every stretch-goal idea from the handout, fully worked - not just one. Useful for validating each idea actually works before class, and as a ready reference no matter which one a student ends up picking.

Sound: victory sound

Add a sound action to the win-check event itself, using the provided sfx_win.wav:

```
Condition: EnemiesRemaining <= 0
Action: Show WinText
Action: Play a sound (sfx_win.wav)
```

Visual: grow the win text in

A "Change the scale of an object" action gives it a bit of punch:

```
Condition: EnemiesRemaining <= 0
Action: Show WinText
Action: Change the scale of WinText to 0.2
Action: Tween the scale of WinText to 1 over 0.4 seconds
```

Structure: win-check stays separate from Combat

The win-check event lives on its own, outside the "Combat" event group - it reads EnemiesRemaining but isn't part of hit-detection itself, keeping the two concerns easy to find independently.

Complete Level 3 solution (all 2 goals combined)

The win-check event with both ideas added:

```
Condition: EnemiesRemaining <= 0
Action: Show WinText
Action: Change the scale of WinText to 0.2
Action: Tween the scale of WinText to 1 over 0.4 seconds
Action: Play a sound (sfx_win.wav)
```
