VIDEO GAME CREATION

Lesson 6 - Programming Basics V: Victory Condition

Semester 1, Week 6 - Level 1 MVP Milestone

- **Objectives:** Explain what a counter/state variable is and how it's used to track "how many are left"; explain why each engine's simplest built-in text display is enough for now, without needing a full UI system; explain what completing the Level 1 MVP milestone means for the capstone project; implement a working win condition.
- **IGDA Tie-In:** Programming - state tracking, win/lose conditions, event-driven programming (introductory)
- **Featured Engine (lecture demo):** Scratch
- **Materials:** Demo laptop with all 8 engines verified (see Teacher's Checklist); Student Handouts, one per engine; students' own Lesson 5 projects (already saved from last week) - no new assets needed this week

Agenda

0:00-0:05	Welcome back, Lesson 5 recap, quick share of enemy rows
0:05-0:25	Tracking State: Counting Down to Zero (live demo in Scratch)
0:25-0:45	Announcing the Win: Each Engine's Simplest Text Tool
0:45-0:50	Milestone Moment: What "Level 1 MVP" Actually Means
0:50-1:00	Introduce lab exercise, hand out engine-specific handouts
1:00-1:50	LAB: Add a win condition to your ongoing [YourName]Game project
1:50-2:00	Exit check / quick share-out - milestone celebration

Levels for this lesson's exercise

- Level 1 (Minimal): "You Win!" appears the instant the last enemy is destroyed.
- Level 2 (Complete): The win message appears exactly once, exactly on time - no errors, no early or repeated triggers.
- Level 3 (Refined): Add a victory sound and/or make the win message more of a celebration.

See: Lesson 6 Teacher's Script, Lesson 6 Prep Checklist, and the per-engine Student Handouts.
