Lesson 15 Teacher's Key: Ready to Show

GDevelop - Instructor Reference Only

VIDEO GAME CREATION

How This Key Is Different Today

There's no new Level 1 solution to give this week - Lesson 15 is a polish-and-present day, not a new-mechanic day. This Key instead consolidates the most common last-mile issues seen across this engine's Lessons 2-14, to help you diagnose a stuck student quickly during polish time.

Known Recurring Quirks in This Engine

- Two events meant to be mutually exclusive (like the full-win and advance-wave events from Lesson 11) that have drifted out of sync after later edits, causing both or neither to fire.
- A Speed or similar value added as a scene variable instead of an object variable (or vice versa), giving every instance the same value instead of individual ones.
- An extension (like Lesson 13's Flash) that got uninstalled or never installed on a specific project, silently hiding its actions from the list.

Fast Diagnostic Questions

- "Click Preview and watch the Debugger tab for variable values in real time" - GDevelop's live debugger is the fastest way to see what's actually happening.
- "Are this event's conditions still exact opposites of its paired event's conditions?" - relevant anywhere two mutually-exclusive events were built (Lesson 11's win/wave split, for example).

If a Student Is Significantly Behind

Prioritize getting Lessons 6-11's Level 1 (win/lose, restart, multiple waves) solidly working before anything from Lessons 12-14 - a complete, simple game presents better than a broken ambitious one.

Presentation Day Notes

- GDevelop's Preview window is quick to relaunch if something goes wrong mid-demo - encourage students not to panic over a needed restart.
