Lesson 15 Teacher's Key: Ready to Show

Godot Engine - Instructor Reference Only

VIDEO GAME CREATION

How This Key Is Different Today

There's no new Level 1 solution to give this week - Lesson 15 is a polish-and-present day, not a new-mechanic day. This Key instead consolidates the most common last-mile issues seen across this engine's Lessons 2-14, to help you diagnose a stuck student quickly during polish time.

Known Recurring Quirks in This Engine

- A signal connected more than once (often from re-running a scene multiple times during testing without restarting the editor), causing double-fired hit/escape logic.
- A $NodeName reference that silently breaks after a node was renamed or moved in the scene tree, producing a null/error instead of a clear symptom.
- await-based code (from Lesson 13) that got copy-pasted without its enclosing function's async context, causing a parse error.

Fast Diagnostic Questions

- "Run the scene and check the Output/Debugger panel for errors" - Godot surfaces most of these issues directly if a student hasn't been checking.
- "Did you rename or move any nodes recently?" - a fast way to find a broken $NodeName reference.

If a Student Is Significantly Behind

Prioritize getting Lessons 6-11's Level 1 (win/lose, restart, multiple waves) solidly working before anything from Lessons 12-14 - a complete, simple game presents better than a broken ambitious one.

Presentation Day Notes

- Have students run their main scene directly (not a test scene) before presenting, to avoid an awkward mid-demo scene switch.
