Lesson 12: Hearing It Happen

001 Game Creator (Windows only)

VIDEO GAME CREATION

This week: your game finally sounds like a game. Four moments - firing, hitting, clearing a wave, and losing - each get their own distinct cue.

Open your own [YourName]Game project from Lesson 11 - don't start a new one.

If you already built an optional sound idea in an earlier lesson (Lessons 2, 3, 4, or 6), keep it - today reuses it directly instead of replacing it. If you didn't, today's steps are written as if starting fresh.

Setup

1. Open your [YourName]Game project from Lesson 11.
2. Import sfx_wave.wav (Resources > Import > Sound) - today's one genuinely new sound - alongside your existing sfx_shoot.wav, sfx_hit.wav, sfx_lifelost.wav, sfx_gameover.wav, and (if built) sfx_win.wav.

Level 1 - Minimal (MVP)

Four sounds fire at the correct moment, at least once each: a shot, a hit/explosion, a wave-clear (on any non-final wave), and a game over. No silence, no obviously wrong triggers.

3. Confirm your Spacebar Input Trigger already has Play Sound(sfx_shoot.wav) (Lesson 3) - add it now if it's missing.
4. On the enemy Actor's "Collided with actor" Trigger, add Play Sound(sfx_hit.wav) as the first action, before the win-check nested If (from Lesson 11).
5. In that same nested If, add Play Sound(sfx_win.wav) in the True branch (only if you built it) and Play Sound(sfx_wave.wav) in the Else branch.
6. On the enemy Actor's "Left/Entered Camera" Trigger (from Lesson 8), confirm Play Sound(sfx_gameover.wav) already fires inside the lives<=0 branch - add it now if it's missing. This sound is mandatory starting today even if you skipped it before.
7. Save, then Play/Test and play through a full round - shoot, hit, an early wave clear, and a loss should each sound distinct.

Highlighted lines are new this week; everything else is code you already have.

```
enemy Actor Trigger: Collided with actor (revised) ->
  If(game_active = 1)
    Variable – Modify Value(score, Add, 10)
    Variable – Modify Value(enemies_remaining, Subtract, 1)
    Play Sound(sfx_hit.wav)
```

```
    If(enemies_remaining <= 0)
      If(wave >= total_waves)
        Variable – Modify Value(game_active, Set, 0)
        Play Sound(sfx_win.wav) // your Lesson 6 Level 3 sound
        Message Box("You Win! - Press R to Restart")
      Else
        Variable – Modify Value(wave, Add, 1)
        Variable – Modify Value(enemies_remaining, Set, 5)
        Play Sound(sfx_wave.wav)
        Call Custom Event(SpawnWave)

enemy Actor Trigger: Left/Entered Camera (unchanged from Lesson 8) ->
  If(game_active = 1)
    Variable – Modify Value(lives, Subtract, 1)
    If(lives <= 0)
      Variable – Modify Value(game_active, Set, 0)
      Play Sound(sfx_gameover.wav) // your Lesson 8 Level 3 sound,
mandatory as of today
      Message Box("Game Over - Press R to Restart")
    Else
      Play Sound(sfx_lifelost.wav) // your Lesson 8 Level 3 sound
```

Level 2 - Complete (Alpha/Beta)

All four sounds fire reliably every time, with no missing or duplicate playback, and each is clearly distinguishable from the others by ear.

- Play a full round: shoot, hit, an early wave clear, and a loss each produce a distinct sound.
- If you built the optional win sound, confirm it still plays on the true win, and sfx_wave.wav doesn't also fire on that same frame.
- Play Sound actions layer naturally - confirm rapid shooting and a hit landing together both play correctly, with no sound cutting another off.

Level 3 - Refined (Ready to Publish) - pick any that interest you

- Audio: if you haven't already, add the optional win sound now - it slots into the exact same Play Sound action as today's wave sound, just a different branch.
- Audio: explore the Sound action's volume/pitch parameters (if available in your version) to add slight variation to the hit sound.
- Structure: notice Play Sound actions live directly inside the exact Trigger representing their event - no separate "sound manager" Actor is needed for a game this size.

If Something's Wrong

- No sound on wave-clear: confirm the Play Sound(sfx_wave.wav) action is actually inside the Else branch of the nested If, not before it.
- Game-over sound plays repeatedly: confirm the branch is still guarded by If(lives <= 0)/Else as a one-time check inside If(game_active = 1), matching Lesson 8's pattern.
- Imported sound doesn't play: confirm the file finished importing (check the Resources panel) before referencing it in a Play Sound action.
